Summary

This document describes the MA – Site Information.

The site has :

- Controller for the Site Information with a custom save and delete
- Controller for the Sites History with create/save/delete disabled.
- Site adjustments control
- Action to refresh computed data with the daemon
- Action to copy the current site record to selected parcel(s)

Description

The site information form allows the user to create new sites and view/modify/delete existing sites using the table MA_SITE.

Controller - Site

The site information has a controller with a custom save and delete.

Functionalities

1. Custom save
 - a. Before save:
 - When the system use MA:
 - Freeze parcel historical data by duplicating all the tables related with a parcel ID, year ID and frozen ID. Create the original records with the frozen ID -1 when:
 1. ma_master.history_only = true
 2. The frozen -1 doesn't existed
 3. The current parcel id and year id don't have an active split merge record.
 - b. Execute open form save
 - c. After save:
 - When the system use MA or TX:
 - Call roll forward data to create or update site
2. Custom delete
 - a. Before delete:
 - When the system use MA:
 - Freeze parcel historical data by duplicating all the tables related with a parcel ID, year ID and frozen ID. Create the original records with the frozen ID -1 when:
 1. ma_master.history_only = true
 2. The frozen -1 doesn't existed
 3. The current parcel id and year id don't have an active split merge record.
 - b. Execute open form delete
 - c. After delete:
 - When the system use MA or TX:
 - Call roll forward data to delete site
3. Action button

Copy Site to Parcel(s) will copy all the current site information and will create a new site record on every parcel selected through the Search Screen. The copy button will be available only if the current record has no unsaved changes on the screen.

Add controller for Sites History:

The screenshot shows the MSGovern application interface. The main window is titled 'CAMA - Site Information'. It has two tabs: 'Site Information' and 'Sites History'. The 'Sites History' tab is selected. Below the tabs is a table with columns for 'Year Id', 'Frozen Id', 'Site No', 'Total Value', and 'Notes'. The 'Extension selector' dialog is open, showing a list of assemblies and classes. The assembly 'MsGovern.OpenForms.CustomControls.dll' is selected. The class 'MA_SitesHistory_Controller' is highlighted in the list. The 'Properties' pane on the right shows the 'Entity tab item' properties for 'MA_Sites_History'.

Control – Site Adjustment

The Site information has a custom control showing a grid to enter adjustments for the site.

Functionalities

1. Show control in a xceed grid
2. Save all the adjustments from the grid when the save button of the site is clicked.
3. Create audit on each adjustment records. (Not implemented yet)
4. Delete all the adjustments from the grid when the delete button of the site is clicked.
5. Load site adjustments (from MA_TABLES) when the create button of the site is clicked.
6. Each row has a label, combo box and text box. The textbox is always disabled.
 - Label: Description of the adjustment type (Fix)
 - Combo Box: Adjustment code (User defined)
 - Text Box: Value (Computed value)
7. Add security on the column in the grid for Adjustment Code.

Configuration

Only need to add setup in OFD and GSM.

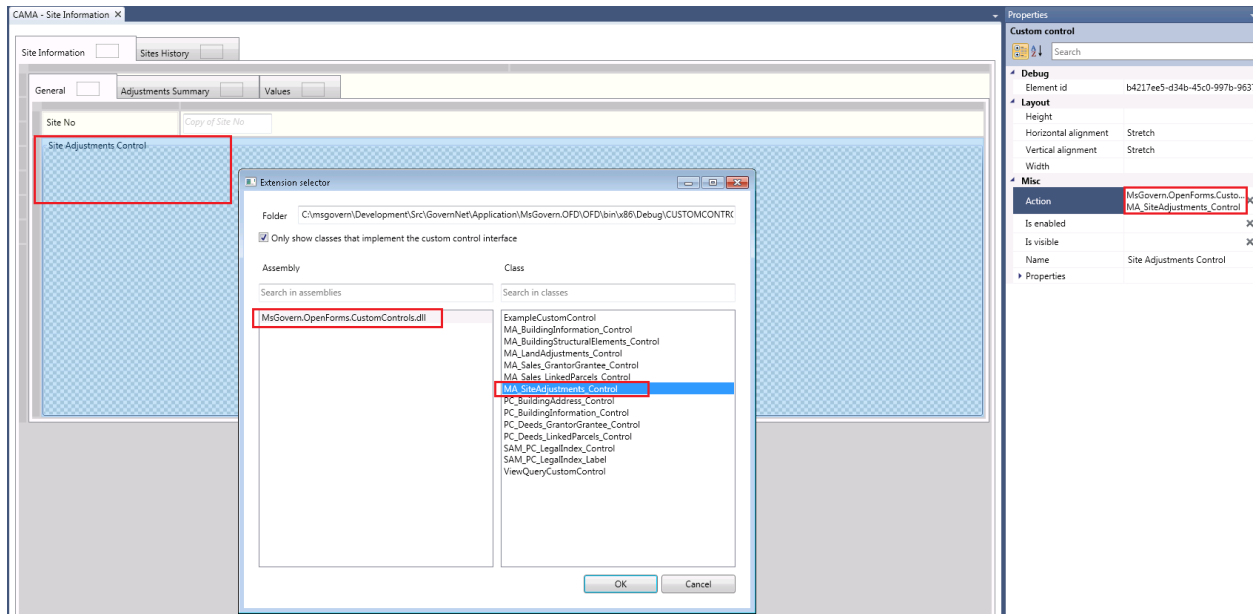

Need to do the setup of the site adjustment in VB6. Please check in the VB6 documentation to see how to create new adjustment.

Action – Refresh Data

1. Refresh the data on the form.
2. The button is always visible as long as the compute is not completed in the daemon.
 - a. Check the column MODIF_STAMP of the root table.
 - When the MODIF_STAMP = NULL, the daemon haven't executed the compute, otherwise the current date time is saved in MODIF_STAMP.
3. The button is always enabled.
4. Button include in the controller.

Action – Copy Site to Parcel(s)

1. The button will be available only if the current record has no unsaved changes on the screen.
2. It will display the Search screen for parcel selection.
3. It will copy all the current site information and it will create a new site record on every selected parcel.
4. It will display a window to ask for the Roll forward data creation.
